We currently have two vacancies

General machinist

We are an engineering company based in West London, manufacturing precision machined parts for the Aerospace and Instrumentation industries. Due to a growing order book we are looking to recruit a machinist. The successful candidate will need to be innovative and have drive to implement new methods and procedures to improve quality without incurring additional cost.

The successful candidate would work predominantly on manual machines including Thread Grinders, Drills, and Capstan Lathes. You would also be required to carry out deburring and vapour blasting. On occasion you may be required to work on the CNC Section.

Experience in precision engineering is essential, but in house training would be provided for the right candidate for the thread grinding. You should also be familiar with the requirements of working within an ISO 9001:2008 environment.

In return we would offer a competitive monthly salary based on a 40 hour week, sick pay, 5 weeks paid holiday, and after the qualifying period, a contributory pension scheme. Opportunities for weekday and Saturday overtime are currently available.

Candidates must be eligible to live and work in the UK.

Mechanical Inspector / CMM Programmer, Operator.

We are an engineering company based in west London, manufacturing precision machined parts for the Aerospace and Instrumentation industries. We are looking to recruit an inspector in order to expand the capabilities of the inspection department. The successful candidate will need to be innovative and have drive to implement new methods and procedures to improve quality without incurring additional cost.

Experience in programming and operating a CMM is essential as well as use of a variety other of equipment including, micrometres and callipers with data output, projectors, gauges etc. A good understanding of Excel is required and experience of gear measurement or calibration would be desirable. The candidate should be familiar with the use of various regulatory and customer standards, and be used to working within the requirements of an ISO9001:2008 and AS9100 rev C. environment.

The successful candidate will be required to carry out first off inspection, goods inwards inspection and final inspection. You would also be required to complete First Article Inspection Reports using the range of equipment available, to varying requirements specified by the customer.

You will be required to communicate with customers and suppliers, by phone or e-mail to discuss and resolve any issues relating to quality that arise.

Training would be provided where necessary for the CMM.

In return we would offer a monthly salary in the region of £22,000 - £27,000 p/a, based on a 40 hour week, sick pay, 5 weeks paid holiday, and after the qualifying period, a contributory pension scheme. Opportunities for weekday and Saturday overtime are currently available.

Candidates must be eligible to live and work in the UK.
